Order from SLA $1.60 63-16147

DESCRIPTORS: *Magnesium, *Phosphates, *Fertilizers, Sulfuric acid, Sulfates, Calcium, Chemical reactions, Tests.

By adding $MgSO_4$ alone to phosphate rock before calcination, an incompletely defluorinated product of low citric solubility is obtained. If H_2SO_4 alone is added to the calcining charge a large excess is required to bring about complete decomposition of the phosphate rock because of the tendency of H_2SO_4 to escape before heat-stable compounds are formed. Even if the rock is decomposed the product tends to be high in calcium (Engineering--Chemical, TT, v. 10, no. 4)
